'Principles' = -> 'Qualities' !* With the usual lack of quantified definition

Oct. 2016 : "Preparing for the future of AJ" from USA

IBM

Proposal of Discussion toward Formulation of AI R&D Guideline

Referring OECD guidelines governing privacy, security, and so on, <u>it is necessary to begin</u> <u>discussions and considerations toward formulating an international guideline</u> <u>consisting of principles governing R&D of AI to be networked ("AI R&D Guideline</u>") as framework taken into account of in R&D of AI to be networked.

Proposed Principles in "A R&D Guideline"

<u>1. Principle of Transparency</u>

Ensuring the abilities to explain and verify the behaviors of the AI network system

2. Principle of User Assistance

Giving consideration so that the AI network system can assist users and appropriately provide users with opportunities to make choices

3. Principle of Controllability

Ensuring controllability of the AI network system by humans

4. Principle of Security

Ensuring the robustness and dependability of the AI network system

5. Principle of Safety

Giving consideration so that the AI network system will not cause danger to the lives/bodies of users and third parties

6. Principle of Privacy

Giving consideration so that the AI network system will not infringe the privacy of users and third parties

7. Principle of Ethics

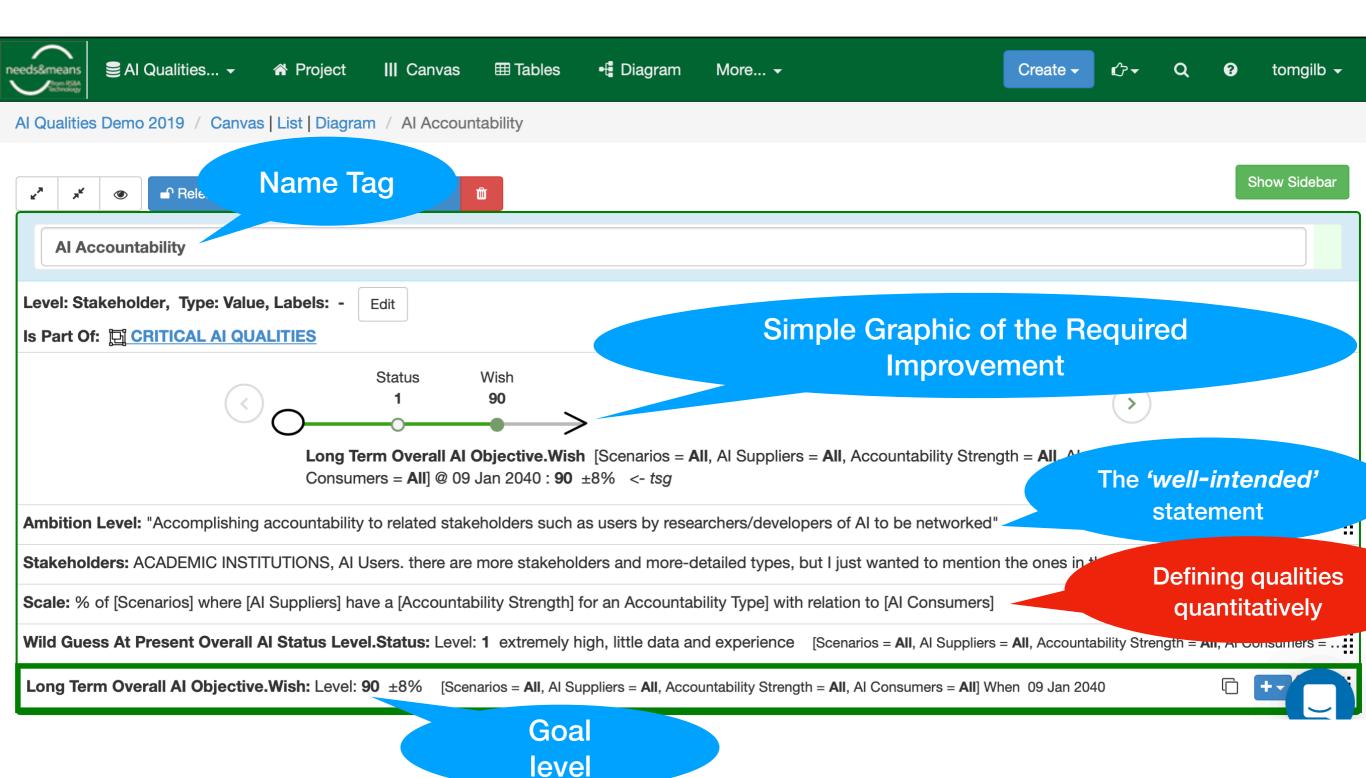

Respecting human dignity and individuals' autonomy in conducting research and development of AI to be networked

8. Principle of Accountability

Accomplishing accountability to related stakeholders such as users by researchers/developers of AI to be networked

2

AI Accountability Defined Fuzziness -> Quantified. Structured, Enriched I did this for all XAI Qualities

Al 'Accountability' scale Detailed [Scale Parameters] Why is this Useful?

I did this for all XAI Qualities

Al Accountability Defined.Scale:	🔍 1 🗋 🕂 Add 🕶 💼
% of [AI Scenarios] where [AI Suppliers] have a [Accountability Strength] for an [Acco	ountabili y Type] with relation to [Al Consumers].

AI 'Technique Evaluation'

with objective evidence, sources uncertainty

= Scale of measure for all the other AI Values

My (TSG) Observations and Conclusions

- The most fundamental obstacle to AI Standards progress is WE NEED TO QUANTIFY AND STRUCTURE-RICHLY all CRITICAL STAKEHOLDER VALUES (ALL > 8)
- Next: we need much-deeper, more-comprehensive identification, and consensus, and detailed knowledge (their values and constraints) about Al/ Al STANDARDS STAKEHOLDERS

Proposal of Discussion toward Formulation of AI R&D Guideline

Referring OECD guidelines governing privacy, security, and so on, <u>it is necessary to begin</u> <u>discussions and considerations toward formulating an international guideline</u> <u>consisting of principles governing R&D of AI to be networked ("AI R&D Guideline</u>") as framework taken into account of in R&D of AI to be networked.

Proposed Principles in "A R&D Guideline"

Principle of Transparency
 Ensuring the abilities to explain and verify the behaviors of the AI network system

 Principle of User Assistance

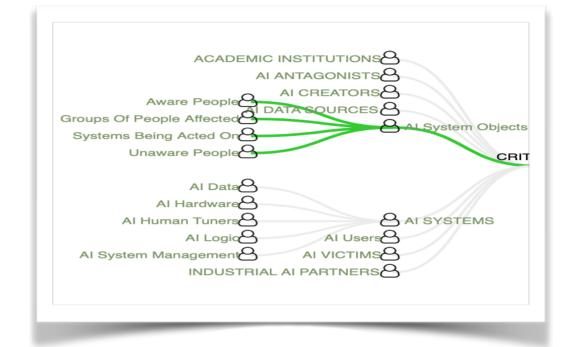

Giving consideration so that the AI network system can assist users and appropriately provide users with opportunities to make choices

- 3. Principle of Controllability Ensuring controllability of the AI network system by humans
- <u>4. Principle of Security</u>
 Ensuring the robustness and dependability of the AI network system
 <u>5. Principle of Safety</u>

Giving consideration so that the AI network system will not cause danger to the lives/bodies of users and third parties

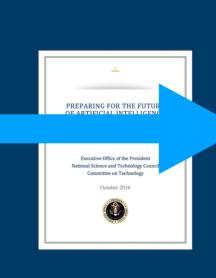

- 6. Principle of Privacy Giving consideration so that the AI network system will not infringe the privacy of users and third parties
- <u>7. Principle of Ethics</u>
 Respecting human dignity and individuals' autonomy in conducting research and development of AI to be networked
 <u>8. Principle of Accountability</u>

Accomplishing accountability to related stakeholders such as users by researchers/developers of AI to be networked

Details of Quantifying all the XAI Objectives

Proposal of Discussion toward Formulation of AI R&D Guideline

Referring OECD guidelines governing privacy, security, and so on, <u>it is necessary to begin</u> <u>discussions and considerations toward formulating an international guideline</u> <u>consisting of principles governing R&D of AI to be networked ("AI R&D Guideline</u>") as framework taken into account of in R&D of AI to be networked.

Proposed Principles in "AI R&D Guideline"

. Principle of Transparency

- Ensuring the abilities to explain and verify the behaviors of the AI network system
- 2. Principle of User Assistance Giving consideration so that the AI network system can assist users and appropriately provide users with opportunities to make choices

3. Principle of Controllability

- Ensuring controllability of the AI network system by humans
- 4. Principle of Security
 - Ensuring the robustness and dependability of the AI network system
 - 5. Principle of Safety Giving consideration so that the AI network system will not cause danger to the lives/bodies of users and third parties
- 6. Principle of Privacy
- Giving consideration so that the AI network system will not infringe the privacy of users and third parties **7. Principle of Ethics**
- Respecting human dignity and individuals' autonomy in conducting research and development of AI to be networked 8. Principle of Accountability
- Accomplishing accountability to related stakeholders such as users by researchers/developers of AI to be networked

XAI Explaining AI Lecture Slides http://concepts.gilb.com/dl958

A Serious 'Multi-dimensional Metrics Attack' on Poor AI 'Academic and Standards' Thinking & Planning.

An analysis of published Principles for Managing and Standardizing Al,

where about 10 AI Qualities like 'Safety' and 'Transparency' are shown to be quantifiable. This is <u>prelude to rational thinking</u> about the entire subject.

> GilbFest Talk June 25 2019 Presented to the IBM AI Standards Committee Members (who said they were suitably impressed)

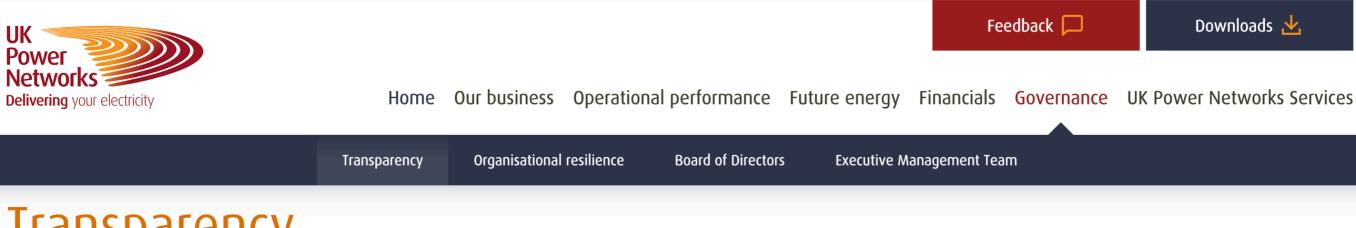

Do politicians like BS?

If you bulls**t an AI system, could you fool it into to making bad decisions?

Transparency

We are acutely aware of the privileged position we occupy as a monopoly provider of an essential service. We are a top performing UK DNO group and accept that this high performance brings with it increased scrutiny from our customers, other stakeholders and the industry at large. We are committed to being open about our operations and, through documents such as this Annual Review and our RIIO-ED1 commitments report, we seek to make it easy for all our stakeholders to understand how we are performing and, most importantly, how you we customers. My associates are using

We believe that it makes business sense for our emvision. The main way employees are incentivised is in line with our vision, our employees are rewarded for customer service and cost saving.

these UN Goals as a framework. But, do all stakeholders have an heme). I identical clear understanding (ity, of the goals?

Since its inception in 2010 the key focus of UK Power Networks . want at the lowest possible cost. We have delivered significant improvements at our customers

On this page you will see how we have performed against the following Sustainable Development Goals:

90%

of UK Power Networks employees are covered by the Trade Union Collective Agreements

End poverty in all its forms everywhere.

Nice but not specific or measurable

Nice but not specific or measurable

Attempt to find something measurable But IS THIS REALLY THE CORE OF POVERTY CONCERNS

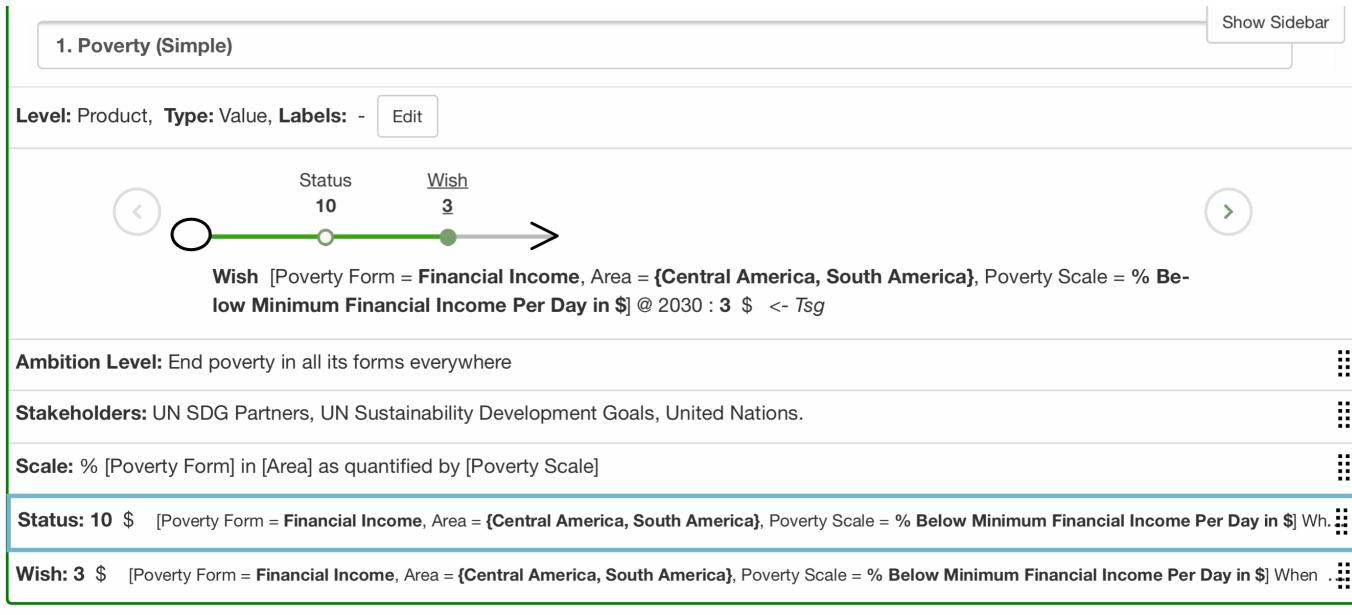

No specific targets set

Goal 1. End poverty in all its forms everywhere

Target 1.5: By 2030, build the resilience of the poor and those in vulnerable situations and reduce their exposure and vulnerability to climate-related extreme events and other economic, social and environmental shocks and disasters

- Indicator 1.5.1: Number of deaths, missing persons and directly affected persons attributed to disasters per 100,000 population
 - See Metadata :
- Indicator 1.5.2: Direct economic loss attributed to disasters in relation to global gross domestic product (GDP)
 - See Metadata :
- Indicator 1.5.3: Number of countries that adopt and implement national disaster risk reduction strategies in line with the Sendai Framework for Disaster Risk Reduction 2015-2030
 - See Metadata :
- Indicator 1.5.4: Proportion of local governments that adopt and implement local disaster risk reduction strategies in line with national disaster risk reduction strategies
 - See Metadata :

Simple Goal 1 Draft

• Problem. This spec is too simple; it cannot serve the purposes of modelling critical aspects of complex systems.

Facts and Figures

⁴... 🏭 Values and Resources

- 4- → 1. Poverty (Decomposed)

 - ---- 🛏 🛏 🖂 👾 🛶
 - 🛏 🛏 1.4 Resources. Poverty
 - 🖂 1.5 Disaster Protection P
 - → → 1.A National Poverty Reduct...
 - ---- >> 1.B Investment Frameworks...

Goal 1 Targets

1.1 By 2030, eradicate extreme poverty for all people everywhere, currently measured as people living on less than \$1.25 a day

1.2 By 2030, reduce at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions

1.3 Implement nationally appropriate social protection systems and measures for all, including floors, and by 2030 achieve substantial coverage of the poor and the vulnerable

1.4 By 2030, ensure that all men and women, in particular the poor and the vulnerable, have equal rights to economic resources, as well as access to basic services, ownership and control over land and other forms of property, inheritance, natural resources, appropriate new technology and financial services, including microfinance

1.5 By 2030, build the resilience of the poor and those in vulnerable situations and reduce their exposure and vulnerability to climate-related extreme events and other economic, social and environmental shocks and disasters

See next slides, for analysis of this

1.A Ensure significant mobilization of resources from a variety of sources, including through enhanced development cooperation, in order to provide adequate and predictable means for developing countries, in particular least developed countries, to implement programmes and policies to end poverty in all its dimensions

1.B Create sound policy frameworks at the national, regional and international levels, based on pro-poor and gender-sensitive development strategies, to support accelerated investment in poverty eradication actions 14

Links

Ok Let's take Poverty Target 1.5 as an example

"By 2030, **build** the resilience of the poor and those in vulnerable situations and reduce their exposure and vulnerability to climate-related extreme events and other economic, social and environmental shocks and disasters"

<- see next slides for analysis and re-organization of this

Defining a structured scale of measure

- The Scale is defined as a set of 'Scale Parameters'
- Each SP is defined as a set of conditions
- Each condition can be defined

Terms can be defined as needed

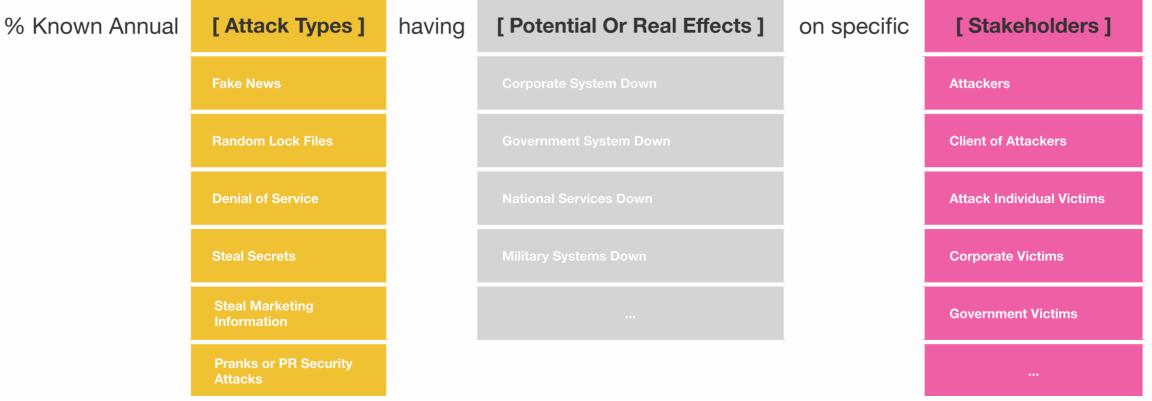

% #Success Leve	I# in [Building] [Res	ilience] for [Vulne	erable] in [Situa	tions] to [Sho	ocks].
emplates 🕶					
Building: defined a	as:				
Economic Pow ty,	ver, Health Power, C	ommunications	Ability, Recove	ry Speed, Re	location Capabili-
Resilience: define	d as:				
Avoiding, Esca	ping, Resisting, Re	covering,			
Shocks: defined as	3:				
Climate, Econo	omic, Social, [Enviro	onmental]			
Environment	al: defined as:				
Earthquak	e, Flood, Avalanche	e, Fire			
Situations: define	d as:				
Individual Pove	erty, Family Poverty	, Communal Pov	erty, National F	Poverty, Epide	emic Hit,
Success Level: d	efined as:				
The attainment	of Resilience for the	ne defined circur	nstances. EG A	voided %.	
Vulnerable: define	ed as:				
			ula Estila sola das		urance, Insufficient

Ambition level:

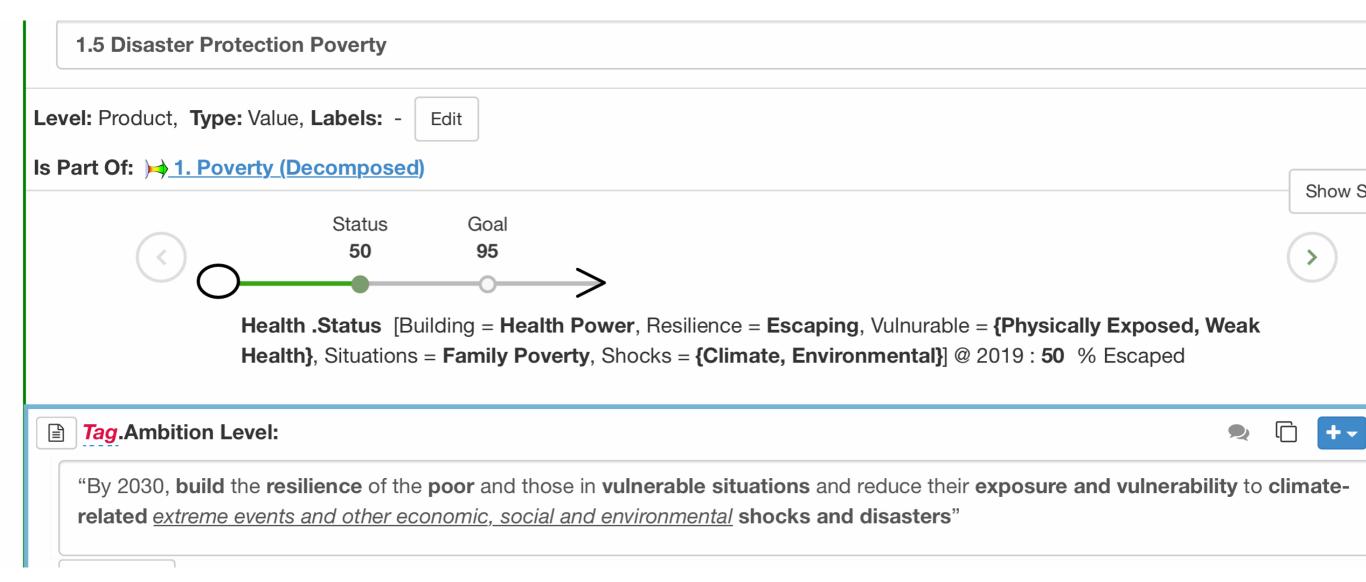

Make Warsaw safe again, by reducing and mitigating any attacks or threats to citizens and visitors

- Scale:

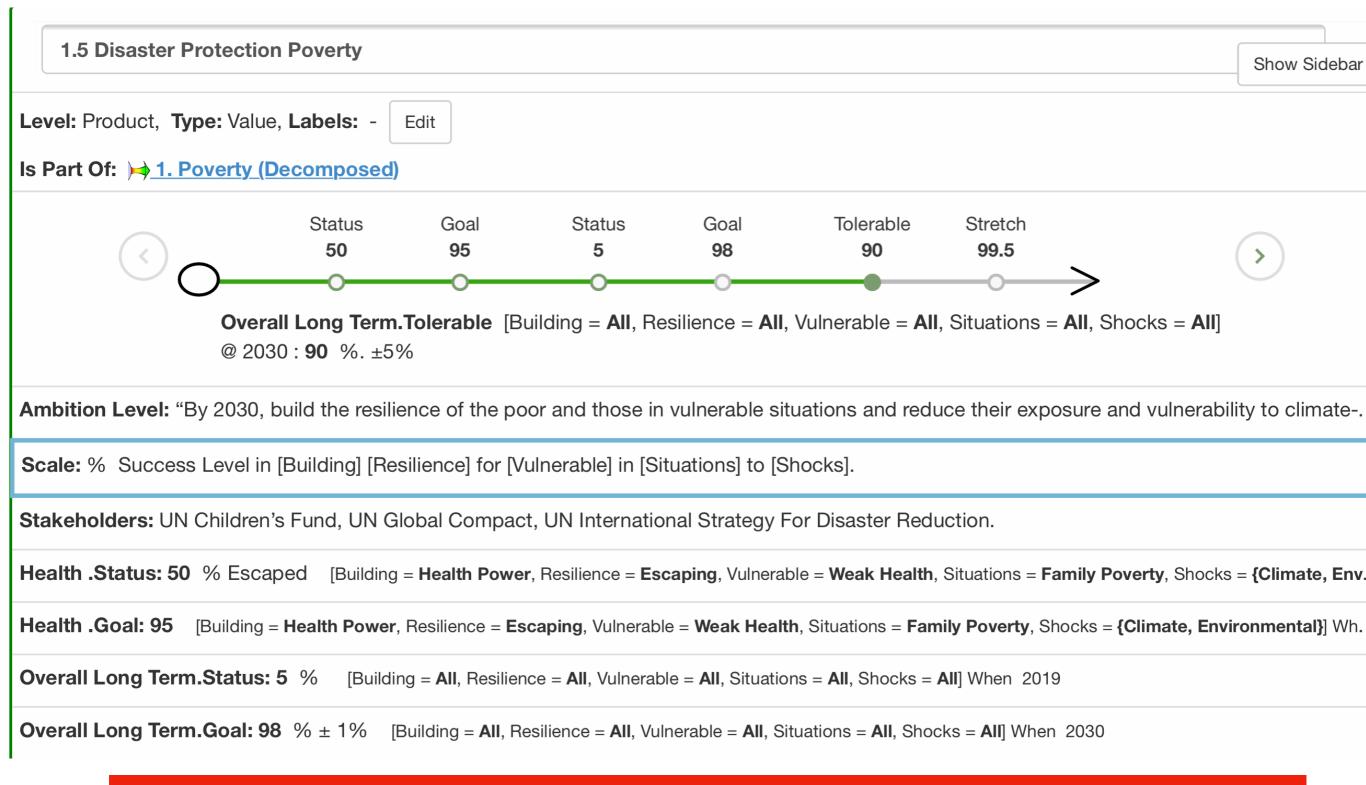

• Visualization of a Scale, with Scale parameter 'dimensions'

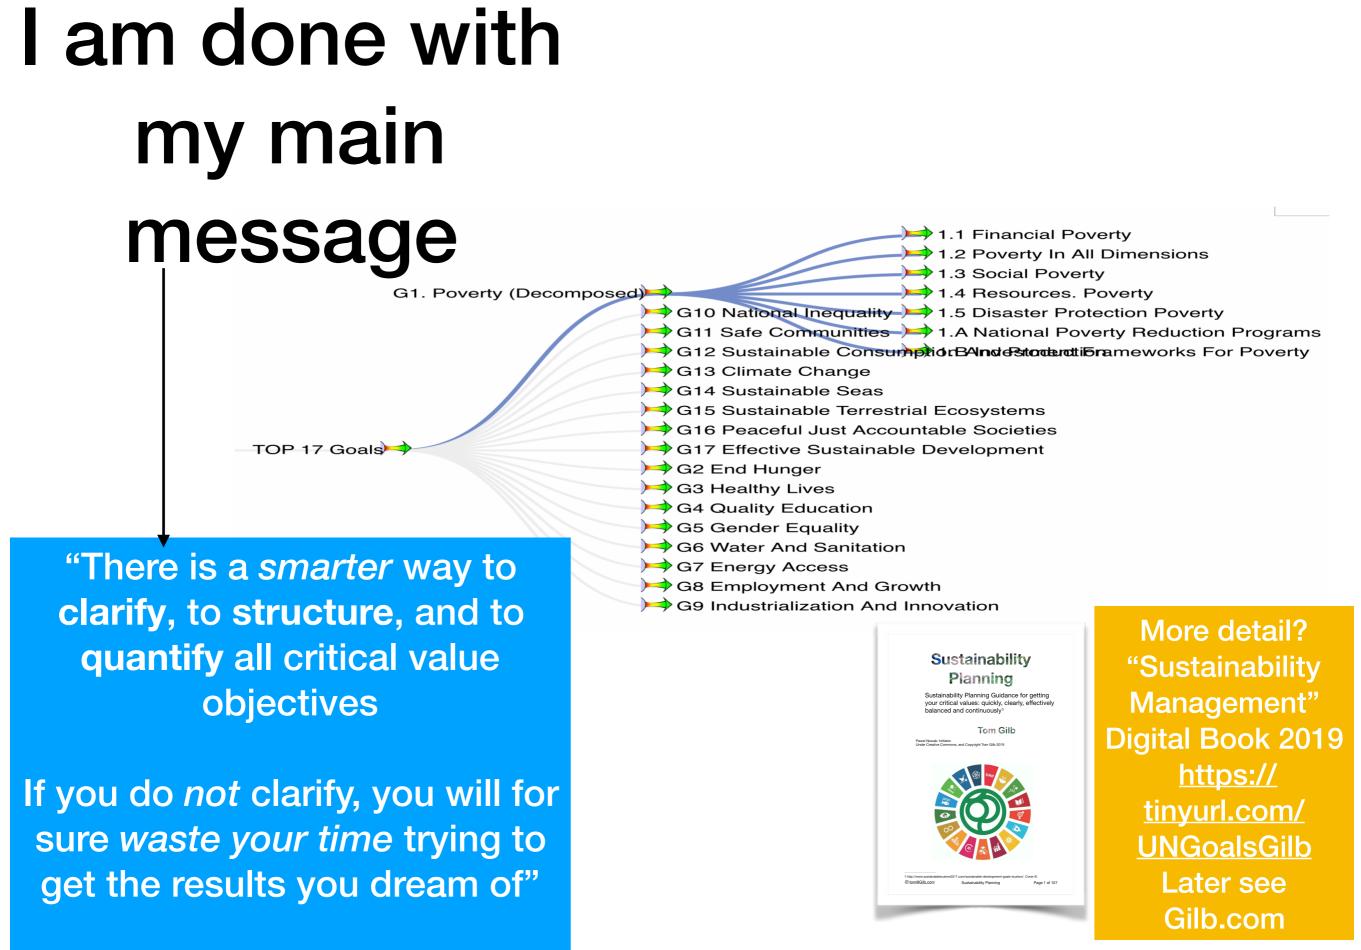

Graphic by anna.maria.karlowska@gmail.com, 2019

 Now we can apply the scale and some selected
 Parameters to define the status quo, and the Goal level

Setting long and short term Goals, re-using the Scale of measure Using a variety of scale *levels* (Wish, Goal, Stretch, Tolerable, Past, Status), and [Scale parameters]. To articulate: <u>How much</u> 'poverty' where, when, for whom, which type, under which conditions.

Now if I have time I'd like to give you one insight into some advantages of this kind of goal quantification and structuring

- Main idea
- You can now evaluate your <u>strategies</u>
- Quantitatively
- In many dimensions
- With regard to risks

=	-ម្ន៍- T1.5.1 Flood Dama
Requirements	_
→ 1.5 Disaster Protection Pov Δ: 5	Pov Δ: 5
Status: 50 → Goal: 60 % #Succes =: 55 % #Suc	es =: 55 % #Suc
% Success Level in [Building] [Resil ∆%: 50 %	sil Δ%: 50 %
[Building = Health Power 50%	50%

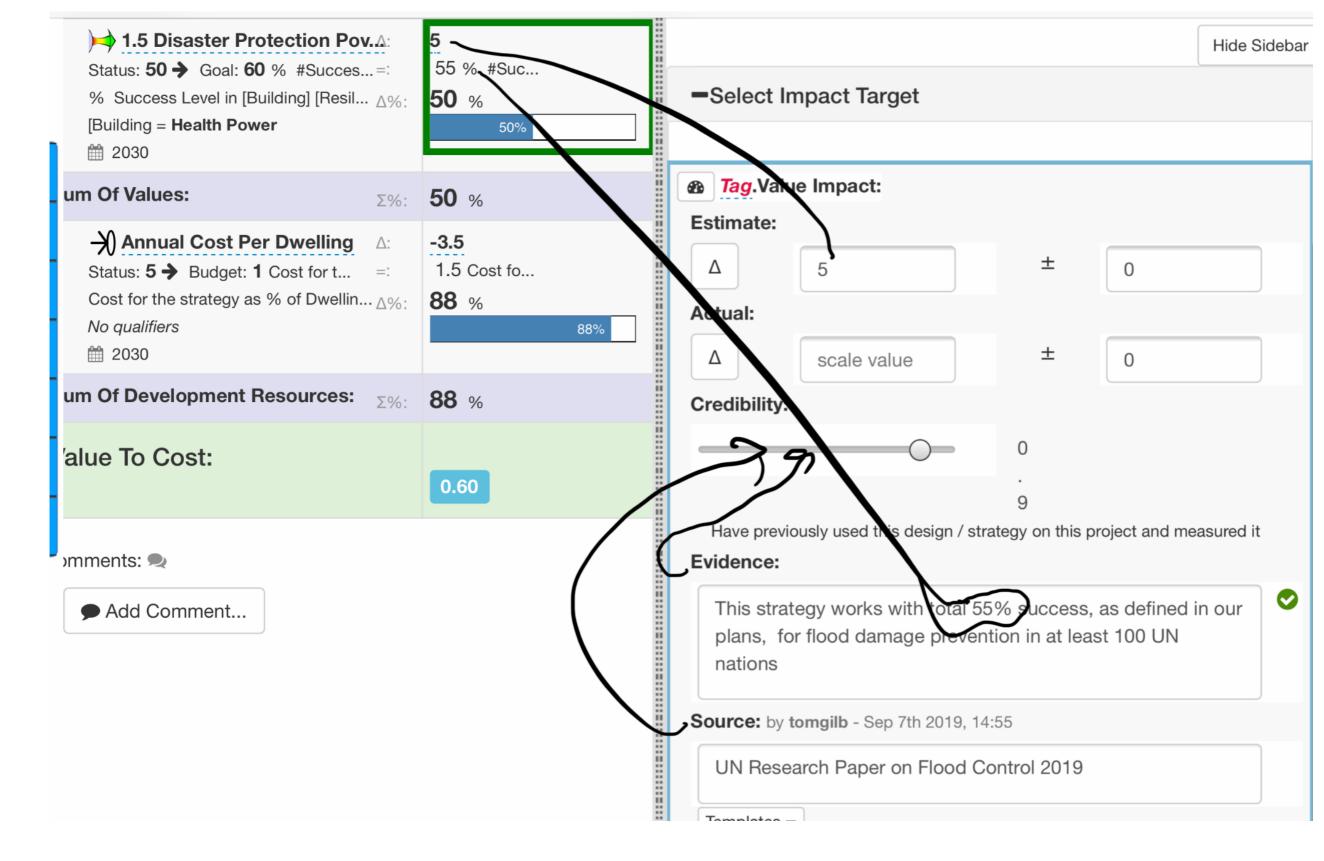

And costs

- * T1.5.1 Flood Dama	- * T1.5.2 Flood Temp

▶1.5 Disaster Protection Pov Δ :Status: 50 ♦Goal: 60 % #Succes=:%Success Level in [Building] [Resil Δ %:[Building = Health Power# 100 2030	55 % #Suc 50 %	5 55 % #Suc 50 %
Sum Of Values: $\Sigma\%$:	50 %	50 %
 Annual Cost Per Dwelling Status: 5 → Budget: 1 Cost for t Cost for the strategy as % of Dwellin Mo qualifiers 2030 	-3.5 1.5 Cost fo 88 % 88%	-0.5 4.5 Cost fo 13 %
Sum Of Development Resources: $\Sigma\%$:	88 %	13 %
Value To Cost:	0.60	3.80

Requirements

We can now estimate how cost-effective our strategy options will probably be.

And if there is time for one more slide. This is how we estimate the credibility of our cost-effectiveness estimates, so we know what to trust, and what to prioritise for good results.
